REPAIRS AND ADJUSTMENTS

During the maximum drawbar tests a lug bolt was lost and the lug was broken. The lug was replaced with a new one. The remaining lug bolts were checked and most of them were tightened slightly.

REMARKS

1. All results shown on page 1 of this report were determined from observed data and without allowances, additions, or deductions. Tests B and F were made with carburetor set for 100% maximum horsepower and data from these tests were used in determining the horsepower to be developed in tests D and H, respectively. Tests C, D, E, G, and H were made with an operating setting of the carburetor (selected by the manufacturer) of 95.6% of maximum horsepower.
2. Observed maximum horsepower (tests F & B)      Drawbar 19.84    Belt 27.79
3. Sea level (calculated) maximum horsepower      Drawbar 21.19    Belt 29.35  
    (based on 60° F. and 29.92" Hg.)
4. Seventy-five per cent of calculated maximum drawbar horsepower and eighty-five per cent of calculated maximum belt horsepower (formerly A.S.A.E. and S.A.E. ratings).      Drawbar 15.89    Belt 24.95

We, the undersigned, certify that the above is a true and correct report of official tractor test No. 283.
